

March 20, 2018

The Honorable Peter Roskam
Chairman
Subcommittee on Health
Committee on Ways and Means
U.S House of Representatives
Washington, D.C. 20515

Dear Chairman Roskam:

On behalf of the Healthcare Leadership Council (HLC), I am writing to thank the Ways and Means Health Subcommittee for holding a hearing on, “The Implementation of MACRA’s Physician Payment Policies.” We thank you for your commitment to advancing reform of the nation’s healthcare delivery system.

HLC is a coalition of chief executives from all disciplines within American healthcare. It is the exclusive forum for the nation’s healthcare leaders to jointly develop policies, plans, and programs to achieve their vision of a 21st century health system that makes affordable, high-quality care accessible for all Americans. Members of HLC – hospitals, academic health centers, health plans, pharmaceutical companies, medical device manufacturers, laboratories, biotech firms, health product distributors, pharmacies, post-acute care providers, and information technology companies – advocate for measures to increase the quality and efficiency of healthcare through a patient-centered approach.

HLC has long supported a shift away from fee-for-service healthcare toward a system based on providing better value for healthcare consumers. Our member organizations have been proponents of delivery system innovations that are value-based, patient-centered and reward improved quality and cost-effective care.

HLC strongly supported the “Medicare Access & CHIP Reauthorization Act of 2015” (MACRA) and is pleased to provide feedback that we expect will strengthen the broader transition to a payment system that emphasizes value. As providers in the delivery system transition to a new payment system that emphasizes value, we encourage prioritizing consumer feedback and outreach, provider feasibility and minimizing new

administrative burdens. We have been pleased to see significant action on key recommendations provided by HLC in previous years. In particular:

- HLC encourages Congress and the Administration to continue to push forward with its efforts to facilitate the movement of organizations to pay-for-performance and Advanced Alternative Payment Models (AAPMs). A critical element of this effort will be incorporating complementary value-based arrangements (such as Medicare Advantage) into AAPM MACRA thresholds as soon as possible.
- HLC appreciates the Center for Medicare and Medicaid Services (CMS) allowing Merit-based Incentive Payment System (MIPS) eligible physicians the opportunity to “pick their pace” by submitting data from a 90-day performance period, rather than a full year. This reporting program has been extended through the end of 2021.
- HLC is pleased to see and strongly supports efforts to reduce the quality measure reporting burden on clinicians. HLC continues to stress that these and other flexibilities are necessary as it may be difficult – particularly in the initial years – to design APMs that meet the financial risk standards and are attractive to a variety of providers. The federal government must ensure, however, that these flexibilities do not lessen important incentives for provider participation.
- HLC supports proposals in the Quality Payment Program (QPP) designed to address the challenge of attracting providers without prior risk-bearing experience into new alternative payment arrangements (such as the virtual groups proposal). In the 2018 final rule, solo practitioners and groups with 10 or fewer MIPS eligible clinicians may establish a virtual group. The performance of individual members of this group will be aggregated to determine the entire groups’ performance. We encourage the federal government to continue to implement these proposals in a way that acknowledges the wide range of technological and reporting capabilities of providers, including the provision of regular outreach, training, and education to allow for wider adoption.
- HLC supports the creation of a new improvement activity for clinician leadership in clinical trials, research alliances, or community-based participatory research (CBPR) – especially around minimizing disparities in healthcare access. HLC supports this effort to improve clinical trial enrollment and encourages the federal government to consider including other physicians or even a counseling service payment to incentivize providers to provide information on clinical trials.

As shared in previous correspondence, HLC would like to continue to emphasize several broader priorities that we believe are critical for the overall success of value-based care programs.

Congress should adopt changes to modernize the federal fraud and abuse legal framework to facilitate stronger provider performance in MIPS measurement categories and facilitate growth into full AAPMs. Modernization of the current legal framework is needed to make it more compatible with healthcare delivery system transformation while retaining appropriate protections against fraud and abuse. Congress should amend Anti-Kickback Statute and Stark Law to allow waivers for stakeholders engaged in alternative payment arrangements (both AAPMs and MIPS-reporting APMs) that meet certain conditions. (An unpredictable and burdensome system of “one-off” waivers is not sufficient for alternative payment goals). Congress should also extend existing Anti-Kickback Statute and Stark Law exceptions for donation and financial support of electronic health information products that facilitate care coordination, cybersecurity protection, and compliance with Advancing Care Information performance category goals.

Congress and CMS must plan now to implement a strategy that will facilitate the introduction of innovative private-sector alternative payment arrangements when permitted in 2021. HLC believes that MA plans, commercial health plans, Medicaid managed care organizations (MCOs), and other appropriate entities should be eligible for consideration as Other Payer Advanced APMs. It is critical that the federal government offer clear and consistent guidance over the next several years as these entities prepare to participate in the program. Including other payers as Advanced APMs would help advance the movement toward value-based care. Making the Other Payer Advanced APM category as broad and as flexible as possible will help move the entire health system toward care focused on value and optimal patient outcomes. HLC encourages CMS to be transparent, flexible, and consistent regarding the criteria for APM “eligibility” for advanced model consideration. It is equally important for CMS to consider the sensitivity of patient and proprietary contractual information to ensure that transparency efforts are also protective of disclosure. Similarly, the Other Payer certification process and timelines should reflect the realities of the market, and would be best supported by a flexible, rolling AAPM certification process.

CMS should focus on the alignment of measurement across all programs to ensure current incentives (such as MA benchmark calculations) facilitate the transition to Other Payer Advanced APM arrangements. CMS should recognize that MA plans forming Other Payer Advanced APM arrangements will need to adjust their bids to account for increased risk and the requirements of other value-based initiatives; and the benchmarks must be adjusted accordingly.

One approach to facilitating a strategy for Other Payer Advanced APMs would be using the Center for Medicare and Medicaid Innovation (CMMI) demonstration projects (under 1115A waiver authority). Treating providers who contract with private sector alternative payment arrangements and who meet requirements regarding EHR usage, quality, and financial risk as participating AAPMs would allow for consistent application of APM

requirements across the Medicare program while reducing provider burden. A voluntary demonstration project designed to test risk contracts between health plans and other stakeholders for inclusion as Other Payer Advanced APMs would allow both CMS and the private sector time to perfect the rules for MA and other programs to become a qualifying MACRA APM. A CMMI demonstration could also allow for experimentation in harmonizing performance measures across programs. HLC members believe the inclusion of MA plans would create a meaningful path for clinicians to pursue the five percent MACRA bonus.

Quality measurement should better incorporate socioeconomic status adjustments to incentivize alternative payment arrangements in areas of high need. It is critical that all efforts to move to outcome-based payment properly account for both complexities of patients as well as the socioeconomic challenges that providers face in caring for patients. Without these adjustments, efforts to reward higher performing providers may result in lower funding for those serving the most vulnerable. To ensure appropriate payment and risk-adjustment, quality programs under MACRA should include a reasonable number of measures that truly capture variance in patient populations. We support the use of a limited number of standard, vetted measures and urge CMS to synchronize measures, expectations, and reporting requirements with existing efforts in the private sector. By working closely with experts in the private sector, a system that appropriately reflects health system challenges – such as the social and economic status of consumers – can create a more accurate payment system.

It is imperative that Congress and CMS continue to work closely with private-sector health leaders during MACRA implementation. The law provides CMS with an unprecedented ability to transform healthcare delivery through incentives. These changes, which will have far-reaching and significant effects on consumers nationwide, should be validated by healthcare experts across the healthcare system. These changes must be deliberate, transparent, and allow for meaningful collaborative effort. Similarly, we urge the federal government to provide clear, concise, and actionable feedback on a timely and regular basis to allow providers to improve the quality of care delivered to patients and enhance program performance.

HLC appreciates the opportunity to comment on the proposed rule. Please contact Tina Grande, SVP for Policy, at tgrande@hlc.org or 202-449-3433 with any questions.

Sincerely,

Mary R. Grealy
President
