The Role of the Pharmacist: A Critical Part of Healthcare

Crystal Lennartz, PharmD, MBA
Health Mart Chief Pharmacist
McKesson
Pharmacists are the first line of defense

- The most accessible healthcare professionals – 95% of Americans live within 5 miles of a pharmacy.
- Trained to provide services to improve patient health and prevent disease.
- Key to reducing costs in healthcare system.
“By 2020, there will be 91,000 fewer doctors than needed to meet demand.”

- Association of American Medical Colleges
Qualified but Underutilized

Pharmacists are trained to provide

• Point of Care Testing (e.g. Flu, Strep)
• Management of Chronic Conditions and Related Medications
• Blood Pressure and Cholesterol Testing
• Immunization Screening and Administration
• Transition of Care Services

But not adequately reimbursed

• Physicians and other providers are reimbursed under Medicare Part B, but pharmacists are not.
• Lack of reimbursement limits patient access
The Pharmacy and Medically Underserved Areas Enhancement Act

• Provide access for Medicare beneficiaries in medically underserved communities to covered Medicare Part B services from their pharmacist.

• Achieve savings for the health care system by increasing access to cost-effective early intervention services.
Savings to the Healthcare System

- Dynamic CBO scoring is necessary to fully demonstrate the long-term savings to our healthcare system.
- Services provided by pharmacists instead of physicians will save money.
The Pharmacy and Medically Underserved Areas Enhancement Act (H.R. 592 / S. 109)
